

IWF 2010 CHALLENGERS AWARD

ETP CUBIT was on August 24 announced as **WINNER** of the 2010 IWF Challengers Award! ETP CUBIT was among twenty-two chosen finalists as having developed some of the industry's most innovative new products.

The Challengers Distinguished Achievement Award® is internationally recognized as one of the industry's highest honors in recognizing advancements in technology, process or significant contributions to environmental improvement in the woodworking industry. It challenges IWF exhibiting companies to develop forward-thinking technology in machinery, materials, supplies, manufacturing techniques, services and safety.

The ultimate way to profile precision

ETP will introduce the new patented adjustable system ETP CUBIT at IWF 2010. The ETP CUBIT is a complete new concept for adjustable systems. Profiling of the tongue and groove in the flooring industry can now efficiently be done at an extreme precision and repeatability. Innovative and user-friendly design together with an extraordinary performance let you in just three steps reach profile success.
