

### Benefits and features

- Minimizing grease volume and leakage
- Axially or radially pressurizing
- Improved performance - minimal runout
- Pressurizing with a high pressure pump

## ETP HYDRO-GRIP® AH-50/60-55

A complete and totally sealed system for existing or new cutter tools. A hydraulic sleeve with a light press fit in each end of the tool are connected by a small channel in the body of the cutter. Heat up the tool before mounting. The tool and sleeve should be bolted together. Pressurization of the entire unit is carried out either axially or radially using a high pressure grease pump.
